### Short Description:

Metso is a global supplier of technology and services for the mining, construction, power generation, oil and gas, recycling, and pulp and paper industries. We have three segments: Mining and Construction Technology, Energy and Environmental Technology, Paper and Fiber Technology. We have R&D centers for automation systems and measurements and analyzers as well as for valve products including intelligent valve controllers and software. In process automation solutions research and development our target is to create technology and services that enable sustainable and safe energy production with lower emissions, as well as improved operational, energy and materials efficiency in industrial processes. In valve technology research and development our target is to create solutions and services that make our customers processes more efficient, reliable, cleaner and safer.

## Facts About Our Company

We have a balanced offering of products, projects and services business. Our three business segments Mining and Construction Technology, Energy and Environmental Technology, and Paper and Fiber Technology offer products and services to a range of customer industries in varying phases of development, which balances our growth and fluctuations in our profitability.

We serve customers around the world in the mining, construction, power generation, oil and gas, recycling, and pulp and paper industries. Most of our customers are industrial companies, like mining companies, energy companies, and paper companies. Contractor customers are mainly in the construction and recycling industries. A large share of our customers operate in the process industry and use natural raw materials or recycled materials in their production.

Large-scale project deliveries are typical to the mining, power generation, and pulp and paper industries. Correspondingly, our deliveries to the construction and the oil and gas industry consist primarily of individual equipment components and smaller package solutions. The share of services is significant in all our customer industries.

## Adv. Mfg. Jobs at Our Company

The Metso culture is young, but it originates from dozens and hundreds of different companies all linked by technological expertise, strong commitment and innovation elements that continue to be important in Metso's success. Our way of working is based on Metso's values and a common code of conduct. We have a shared desire to always act as individuals while respecting equality. Sustainability principles are visible throughout our work and they help shape our activities and our business. Customer success is actually one of our values, and therefore our overall target is for operational excellence. We want to be the industry benchmark.

Continuous learning, innovativeness and creativity are important to us. We train and develop our employees and our processes to improve continuously.

Every summer, Metso hires 150-250 summer employees and trainees. Most of these positions are in Finland and Sweden, countries that have a strong culture and long tradition of summer jobs. The Nordic summer season is short and everyone wants to take a vacation during the summer months. This creates a good opportunity for students to become trainees and to find out if their studies are a good match for the career they have in mind. There are summer jobs in virtually every Metso business and location.
